

AdBlock pour Opera ou comment bloquer les publicités

Opera ne peut pas utiliser les extensions de FireFox, telle qu'AdBlock.

La raison est qu'Opera ne supporte aucune sorte de plug-in ou d'extension.

Mais tout n'est pas perdu ! 😊

En effet, avec l'utilisation du fichier `urlfilter.ini`, il est possible de filtrer ce que va afficher le navigateur.

Il est possible d'utiliser des fichiers très complets comme celui de [FanBoy](#), mais gardez à l'esprit qu'un gros fichier ralentira le démarrage d'Opera...

Voici le mien :

[urlfilter.ini](#)

```
Opera Preferences version 2.1
; Do not edit this file while Opera is running
; This file is stored in UTF-8 encoding
